

Myethos Finance Litepaper

Myethos Finance Team

May 1, 2025

Introduction

Myethos Finance is a blockchain-based investment fund governed by the community, where anyone in the world can be a member of a trading fund for Indonesia's growing stock market. Supported by \$MYF tokens and a DAO, it enables global investors to pool funds as a collective, fund trading activity in Indonesian shares, and get involved in the decision-making on managing funds openly.

What is Myethos Finance?

Myethos Finance aims to connect Indonesian stock market (IDX) with international investors. Indonesia, being a developing country, provides immense growth opportunities, but they are still out of reach for international investors. Blockchain technology has helped us establish a platform where individuals can invest in Indonesian equities along with having influence over how the fund is to be managed.

Our Mission

- **Empowerment:** Give global investors the power to invest in Indonesian stocks without intermediaries.
- **Transparency:** Ensure complete transparency by letting token holders make key decisions.
- **Access:** Open the door to one of the fastest-growing stock markets in the world.

How Does It Work?

1. **\$MYF Token:** The \$MYF token is used for governance within the DAO. Token holders vote on how the fund is managed, how assets are allocated, and how profits are distributed.
2. **DAO Governance:** All major decisions, like stock picks and risk policies, are made by the community through voting. This gives everyone a voice in how the fund operates.
3. **Indonesian Stock Portfolio:** The fund is managed by professional asset managers who focus on high-growth stocks in sectors like technology, commodities, and renewable energy in Indonesia.

Tokenomics

- **Total Supply:** 1,000,000,000 \$MYF tokens
- **Decimals:** 4
- **Network:** Solana
- **Mint Address:** 7tGRxfXS5dNFT9JT9VUAek8cK3VMzjQTCGr8QjVpyVbC

Token Allocation:

- **40%** - Treasury / DAO Fund
- **20%** - Liquidity & DEX Pools
- **15%** - Community & Staking
- **10%** - Marketing & Partnerships
- **10%** - Team & Advisors
- **5%** - Early Supporter Airdrop

Buyback Mechanism

Myethos Finance will implement a token buyback program in which a portion of operational revenue or treasury excess will be utilized to purchase \$MYF tokens on the open market. Bought-back tokens can be either burned to reduce total supply or reassigned to the DAO treasury. This will continue to support long-term token value, benefit long-term holders, and strengthen the overall ecosystem.

Governance & Community Involvement

As a decentralized project, **Myethos Finance** is governed by its community. Token holders can:

- **Vote on Proposals:** Submit and vote on fund management decisions.
- **Earn Rewards:** Participate in staking and governance to earn additional \$MYF tokens.
- **Influence Fund Strategy:** Your vote can change how the fund operates, from asset allocation to risk management.

Why Invest in Indonesian Stocks?

Indonesia boasts one of the fastest-growing economies in Southeast Asia. It has an expanding middle class, thriving digital economy, and robust agriculture, commodities, and infrastructure sectors. The IDX stock market has tremendous upside potential.

- **Growth Potential:** To match the market capitalizations of other major economies:
 - U.S.: 66x growth
 - China: 16x growth
 - Japan: 8x growth
 - India: 6x growth

Source: TradingView, as of May 2025

The picture is of a series of charts comparing various world stock indices, indicating their performance over a specific period. Among them, the IDX (Indonesia Stock Exchange) is the second best performing index after NIFTY 50, which is the best. This indicates good market momentum and confidence of investors in Indonesia's economic condition. The graphs would likely indicate growth trends, with the IDX showing outstanding growth compared to other indices of other countries like the U.S., China, Japan, and others. Such performance proves Indonesia's vigor and attractiveness in the current global financial arena. For global investors, this is an opportunity to tap into a market poised for significant growth.

Roadmap

- **Phase 1:** Launch litepaper, legal review, and initial token distribution.
- **Phase 2:** Develop smart contracts, \$MYF token launch.
- **Phase 3:** Onboard fund managers and ensure regulatory compliance.
- **Phase 4:** Expand community, launch DEX listings, and deploy funds.
- **Phase 5:** Continue growth, increase fund diversity, and expand marketing.

Legal & Compliance

We will partner with licensed Indonesian fund managers and have the project fully compliant with local (OJK) and international financial regulations, providing global access to Indonesian shares in a secure manner.

Risk Management

We are committed to reducing risks through:

- **Diversification:** Spreading investments across different sectors to reduce market volatility.
- **Regulatory Compliance:** Staying up-to-date with legal requirements in Indonesia and globally.
- **Smart Contract Audits:** Regular audits to ensure smart contracts are secure and reliable.

Conclusion

Myethos Finance is here to make investing in Indonesian stocks as simple and transparent as possible. By utilizing blockchain technology and DAO governance, we're creating a decentralized investment fund that allows anyone in the world to participate in Indonesia's economic growth.
